

What do I want to learn or understand better?

During the first week of this course I focused on understanding the course structure and learning about Scrum. I want to continue next week learning how Scrum works and how to apply it to projects in general but also our own project. I also want to have a good understanding of our project specifications and scope next week and hopefully a fully made product backlog as well. To achieve this, I hope that next week my team and I can have further discussions with our stakeholders as well as have internal meetings where we, amongst other things, specify the project scope.

How can I help someone else, or the entire team, to learn something new?

Right now I feel like there is nothing new to teach my team. In fact I feel like the other team members, especially those who study IT, have things they can teach me. Therefore I supported the proposal from Jonas Röst that they hold small workshops about Github and Trello for the rest of the team.

What is my contribution towards the team's use of Scrum?

This first week my contribution to the use of Scrum has been to further develop my knowledge about the concept so that I have more knowledge to apply next week. Additionally I have volunteered to be the next scrum master whenever we rotate roles.

What is my contribution towards the team's deliveries?

This first week I actively participated in discussions about our project and participated in the creation of our social contract. Throughout the course I hope to gain as much knowledge as possible and learn as much as possible from some of our team members who seem to be really good at programming, as well as further develop my leadership skills. Therefore I will also try to contribute as much as possible by both programming but also contributing to meetings either as a leader or active participant.
