

What do I want to learn or understand better?

Scrum seems like a very useful tool, so using it and learning more about it will be very interesting. Hopefully the structure is something I can bring to other courses since structure has always been something I don't have a lot of during my studies.

How can I help someone else, or the entire team, to learn something new?

I feel like there is nothing concrete at the moment that I can "teach" to the team, since I am not as experienced in programming as some group members and probably not as experienced in organisation as some others. As the course moves on this might change of course.

What is my contribution towards the team's use of Scrum?

For now mostly just participating and learning the system together with the group.

What is my contribution towards the team's deliveries?

For now the only deliverable has been the social contract, for which every group member participated in a conversation at campus. In the future I will help in the way that helps the team the most, and feel comfortable with doing administrative, report writing and programming work alike.
